

ABSTRACT OF DISCLOSURE

An electrically conductive roll which includes a shaft body and which includes at least a conductive elastic layer formed by extrusion on an outer circumferential surface of the shaft body, wherein the conductive elastic layer is formed of at least one conductive rubber composition which includes a rubber material, a thermoplastic resin having crosslinkable double bonds and a melting point in a range from 40°C to 100°C, and at least one conductive agent, the thermoplastic resin being included in an amount of 5 to 50 wt.% of a total amount of the rubber material and the thermoplastic resin.
